01 ENGINEERING PROFILE

Cybersecurity undergraduate and software engineer who learns by designing, building, and operating real systems. My work spans full-stack web applications (Next.js App Router, TypeScript, FastAPI), automated verification and security inspection pipelines (Python), resilient long-running Telegram bots, and self-hosted Linux cloud infrastructure (Coolify, Docker, PostgreSQL, Redis, Caddy/Nginx). Every project carries an honest, verifiable engineering status label.

02 SELECTED SYSTEMS & ARCHITECTURE

Verify Hub — IN DEVELOPMENT

Python · Playwright · GitHub API · Telegram

Automated website verification and security inspection pipeline. Executes headless browser checks, captures visual evidence screenshots, audits TLS/HTTP responses, and dispatches structured alerts.

Order of Service — IN DEVELOPMENT

Next.js · TypeScript · Tailwind CSS

Real-time liturgical & event document planning engine. Features live split-pane document preview, structured section reordering, inline typography controls, and reusable service blueprints.

Self-Hosted Cloud Lab — ACTIVE · ONGOING

Ubuntu · Coolify · Docker · PostgreSQL · Redis

Production-grade self-hosted deployment environment on AWS EC2 & Linux. Automated GitHub webhook deployments via Coolify, TLS reverse-proxy routing, isolated container networks, and Cloudflare Tunnel.

Miro AI & Media Bot — EXPERIMENTAL

Python · aiogram · LLM APIs · SQLite

Long-running asynchronous Telegram assistant combining conversational AI with persistent per-user context memory, media extraction pipelines, rate-limiting, and admin telemetry commands.

Alchemist Market Engine — IN DEVELOPMENT

Python · Pandas · Algorithmic Analysis

Market-structure intelligence engine detecting Break of Structure (BOS), Change of Character (CHOCH), liquidity sweeps, and Fair Value Gaps (FVG) with automated Telegram chart dispatches.

Editorial Portfolio & CMS — LIVE · PRODUCTION

Next.js 16 · React 19 · Prisma · Framer Motion

High-precision engineering portfolio featuring autonomous multi-cursor DOM assembly, WebGL dithering shaders, live GitHub API integration, stealth admin suite, and rate-limited contact pipeline.

03 TECHNICAL CAPABILITIES MATRIX (CORE · WORKING · EXPLORING)

LANGUAGES & CORE	Python (Core) · TypeScript (Core) · JavaScript ES2024 (Core) · SQL · Bash / Shell · HTML5 / CSS3
FRONTEND & MOTION	Next.js 16 (App Router) · React 19 · Tailwind CSS v4 · Framer Motion 12 · shadcn/ui · WebGL
BACKEND & DATA	FastAPI · Node.js · REST API Design · Prisma ORM · PostgreSQL · SQLite · Redis · Zod Validation
DEVOPS & INFRA	Linux (Ubuntu) · Docker · Coolify PaaS · AWS EC2 · Caddy / Nginx · Cloudflare Tunnel · Git
SECURITY & AI	OWASP Top 10 Study · Automated Browser Verification · Telegram Bots (aiogram) · LLM APIs

04 EDUCATION & SECURITY PRACTICE

B.Sc. in Cybersecurity (Undergraduate) — 2022 – 2026 (EXPECTED)

Coursework & applied lab focus: Web Application Security, Network Protocols, Linux Systems Administration, Cryptography Fundamentals, and Defensive Tooling. Complemented by operating a live self-hosted production homelab and building verification instruments around the OWASP Top 10.
