PROFILE

Cybersecurity student and aspiring software engineer who learns by building. I create real applications, security-minded tooling, automation and self-hosted infrastructure, and I document all of it honestly - concepts, works in progress and running systems, clearly distinguished. Currently deepening full-stack engineering (Next.js, TypeScript, Python) while operating my own deployment environment on Linux.

SELECTED PROJECTS

- **Order of Service - church service planning app.** Real-time document preview, inline editing and reusable liturgy blueprints. In development (Next.js, TypeScript).
- **Verify Hub - website verification & inspection pipeline.** URL checks, browser automation with screenshot evidence, error reporting, GitHub and Telegram notifications. In development (Python).
- **Miro - Telegram AI & music bot.** Conversational AI, music features, per-user memory and admin commands; reliability-first long-running service. Experimental (Python, aiogram, SQLite).
- **Self-hosted deployment & development infrastructure.** Applications deployed from GitHub via Coolify on Ubuntu; Docker, PostgreSQL, Redis, Nginx, DNS and reverse-proxy practice; AWS EC2 managed over SSH. Ongoing.
- **Alchemist - market-structure intelligence bot.** Telegram delivery of BOS/CHOCH, liquidity, fair-value-gap and regime observations. Analysis software only - not financial advice. In development (Python).
- **Developer portfolio - this website's sibling.** Next.js App Router, TypeScript, Tailwind CSS, budgeted motion, GitHub integration with graceful fallback, validated and spam-protected contact pipeline. Live.

TECHNICAL SKILLS

Languages: Python (core), JavaScript (core), TypeScript, SQL, HTML/CSS, Bash

Frontend: React, Next.js (App Router), Tailwind CSS, shadcn/ui, Motion

Backend & data: FastAPI, Node.js, REST API design, Prisma, SQLite, PostgreSQL, Redis

DevOps & cloud: Linux (Ubuntu), Docker, Git/GitHub, AWS EC2 (SSH), Coolify, Cloudflare Tunnel, Nginx, DNS

Security & automation: web security fundamentals (OWASP study), browser automation, Telegram bots (aiogram), LLM integrations, yt-dlp

EDUCATION & LEARNING

Cybersecurity student - coursework across web security fundamentals, Linux, networking and security tooling; self-directed study of the OWASP Top 10 through building inspection and verification tools.

Continuous practice - operating a self-hosted environment (deployment, DNS, reverse proxies, databases) and maintaining a catalogue of personal projects with honest status labels.

Full case studies, honest project statuses and writing are available on the portfolio website. This CV lists only work that exists - no invented metrics, employers or certifications.
